Refer to the Risk Definitions Page and John Hancock Variable Insurance Trust prospectus for details on these risks.

Portfolio Highlights

Investment Objective and Policies ▶ The Portfolio seeks long-term capital appreciation.

Managed in a Style Similar to ▶ Templeton Growth A

Why Consider this Portfolio

- ▶ This portfolio provides clients with exposure to both U.S. and non-US securities, including emerging markets
- ▶ The management team uses a bottom-up, value-oriented, long-term approach, focused on buying attractively priced securities based on earnings and/or asset growth over a 5-year horizon

How this Portfolio Invests

Investment Process ▶ The managers apply a bottom-up, value-oriented, long-term investment approach, focusing on the market price of a company's securities relative to the manager's evaluation of the company's long-term earnings, asset value, and cash-flow potential. The managers also consider and analyze various measures related to stock valuation, such as a company's price-to-cash-flow ratio, price-to-earnings ratio, profit margins, and liquidation value. Their long-term approach focuses them on companies with strong outlooks for earnings and/or asset growth over a 5-year horizon. The team works closely together, drawing on the experience of analysts based in different offices around the world to arrive at a "Bargain List" of attractively valued stocks. The "Bargain List" contains 100 to 200 stocks that the managers believe are undervalued. From that list, they select stocks based on the portfolio's investment criteria and their individual research.

This material is neither an offer to sell nor a solicitation to buy securities. The information is current as of March 31, 2013, unless otherwise noted, and is not a guarantee of subsequent investment composition, which is subject to change at the discretion of the portfolio manager.

This material describes the underlying investment options for life insurance products and is authorized for distribution only when preceded or accompanied by a current prospectus for the relevant product of John Hancock Life Insurance Company (U.S.A.) (John Hancock USA), John Hancock Life Insurance Company of New York, and for the John Hancock Variable Insurance Trust. Each prospectus contains details on investment objectives, risks, fees, charges and expenses as well as other information about the investment company, which should be carefully considered. Please read the prospectuses carefully, and consider these factors before investing.

Insurance policies and/or associated riders and features may not be available in all states.

Insurance products are issued by: John Hancock Life Insurance Company (U.S.A.) (not licensed in New York) and John Hancock Life Insurance Company of New York, Valhalla, NY 10595. Securities are offered through **John Hancock Distributors LLC** through other broker/dealers that have a selling agreement with John Hancock Distributors, LLC, 197 Clarendon Street, Boston, MA 02116.

Variable universal life insurance has annual fees and expenses associated with it in addition to life insurance related charges (which differ with the product chosen), including surrender charges and investment management fees. Variable universal life insurance products are long-term contracts and are sold by prospectus; they are unsuitable as a short-term savings vehicle. The primary purpose of variable universal life insurance is to provide lifetime protection against economic loss due to the death of the insured person. Cash values are not guaranteed if the client is invested in the investment accounts. There are risks associated with each investment option, and the policy may lose value.

These pages describe the John Hancock Variable Insurance Trust portfolios that are available under John Hancock's variable universal life insurance products. The inception dates listed are the dates the portfolios were added to John Hancock Variable Insurance Trust, and may predate the offering of the portfolio in the John Hancock separate accounts. Where this occurs, the performance is hypothetical and shows how the fund would have performed had it been available during the time period.

Life insurance products are not deposits or obligations of, or guaranteed by, any bank or financial institution. Life insurance products are not insured by the FDIC, the U.S. Government or any other government agency and are subject to investment risks, including the possible loss of principal.

The placement of investment options within style boxes and according to potential risk/return shows our assessment relative to one another and should not be used for comparison with other investment options available outside of John Hancock USA. John Hancock USA determines peer groups and indexes based on the closest match in terms of investment objectives, policies, processes and style. Each investment option's peer group, index, style box and risk/return spectrum placement is subject to change.

The investment objectives and policies of the underlying portfolios may be similar to those of other funds managed by the same asset manager. There is no guarantee that any portfolio's investment results will be comparable to the investment results of another fund, including other funds with the same asset manager. Investment results will differ and may be higher or lower than the investment results of other such funds.

Allocating net premiums to a Lifestyle portfolio is designed to help reduce the market volatility that one may experience through the allocation of premiums to only one or a small number of investment options. There are risks associated with any investment and it is possible to lose money by investing in the Lifestyle portfolios.

Morgan Stanley Investment Management Inc. does business in certain instances using the name Van Kampen.

Deutsche Asset Management is the marketing name in the U.S. for the asset management activities of Deutsche Bank AG, Deutsche Investment Management Americas Inc., Deutsche Asset Management Inc., Deutsche Asset Management Investment Services, Ltd., Deutsche Bank Trust Company Americas, Scudder Trust Company and RREEF.

American Global Small Capitalization Trust, American New World Trust, American International Trust, American Global Growth Trust, American Growth Trust, American Blue Chip Income and Growth Trust, American Growth-Income Trust, American Asset Allocation Trust, American Diversified Growth and Income Trust, American Fundamental Holdings Trust, American Global Diversification Trust, American High-Income Bond Trust and American Bond Trust, a series of John Hancock Variable Insurance Trust, invests in Class 2 shares of a corresponding American Funds Insurance Series Portfolio (a separate group of mutual funds dedicated to insurance products). The performance of these Trusts will be lower than the performance of the corresponding American Funds Insurance Series Portfolio due to the Rule 12b-1 fee assessed against these Trusts.

Definitions of Portfolio Statistics

Number of Holdings: The number of holdings the fund is currently invested in.

Turnover: The lesser of the total sales or purchases of a fund in a year divided by its average monthly assets for the year.

P/E Ratio: The current share price divided by twelve-months' earnings per share. Shows you what the value of a stock is, compared to its earnings strength.

Beta: Shows the volatility of the fund relative to its benchmark index. A beta greater than 1.0 means the fund historically has been more volatile than its index, while a beta less than 1.0 means the fund has historically been less volatile than its index.

Current Yield: The annual income return on an investment, expressed as a percentage of the price. This figure does not reflect applicable insurance-related fees and expenses.

R-squared: The degree to which the fund and its benchmark index are correlated. The closer it is to 1.0, the more similar the historical performance between the two.

Average Duration: The weighted maturity of a bond's cash flows, used to estimate the price sensitivity of bonds for a given change in interest rates. Always equal to or shorter than the maturity, it shows the risk of interest rate changes on reinvesting the periodic interest payments of a bond.
